

ECOIN GLOBAL

People trading with people

Ecoin (ECN) is the digital trading unit used on Ecoin Global. Members buy and sell ECN through the platform's marketplace.

Payments go directly between buyers and sellers. ECN balances and completed transactions are recorded in each member's platform wallet.

How a member trade works

01 The platform connects

A buyer and seller agree through an order or a listed offer. No token swap is required.

02 The buyer pays the seller

Payment goes directly to the seller's bank account, using the private order instructions.

03 The buyer submits proof

Only the buyer uploads proof of payment and confirms that the payment was voluntary.

04 The seller confirms receipt

After checking cleared funds, the seller confirms payment and the platform releases the held ECN.

Member trades use direct payments rather than a pooled central payment account.

Ways to buy and sell

AUTOMATIC MATCHING

Choose your quantity and price limit

Publish a buy or sell order. The system looks for compatible eligible orders and respects your limit. Each match creates private payment instructions.

Current trading fee: 2.3% in ECN on each side. Review the fee and net coins before accepting.

BUY FROM A LISTING

Choose an available seller's offer

Review the listed price and quantity, reserve the ECN, then pay the seller directly. Sellers add banking details and list coins from their available balance.

A clear view of your own wallet

Your personal ledger

Follow completed buys and sells, fees, holding bonuses and referral credits in one account history.

Your wallet shows your activity.
The market shows platform trading.

More ECN does not guarantee more cash value. Prices and the ability to sell can change.

1% daily

Current holding policy for eligible purchased ECN. Bonuses, referral credits and allocations do not earn. Credits depend on the holding reserve.

10% referral bonus

The current referral policy credits ECN after an eligible referred purchase completes, funded from reserves.

Trust scores support reliable trading

Trust is the glue between participants. The platform uses demerits to discourage delays and restrict unreliable trading.

0

Best score

Everyone starts at zero. Lower demerits indicate a better record. Delays and unpaid orders add demerits.

24 hours

Payment deadline

An unpaid matched order expires after its payment deadline. The buyer's account is blocked from new trading.

3 unpaid

Order strikes

Three distinct unpaid buy-order strikes also trigger a block. Only admin can restore trading access.

Blocks also restrict reuse of recorded email and phone details. Existing payment orders remain accessible.

THE FUTURE OF ECOIN GLOBAL

A platform shaped by its participants

Participants create the offers, complete payments and build the trading record that keeps the marketplace operating.

Our direction

More reliable matching. Clearer account records. Better tools for support and trust review.
